

Suprasafe Q & A

What are Supra key safes?

- Supra key safes are high security key safes used to store building access keys for fire department use. These key safes are purchased by the building owner.

How does it work?

- Your fire department is issued the requested number of keys that are coded specifically for your city/town.
- When you respond to an emergency condition, you simply use your Supra master key to open the key safe and gain access to the building keys stored within the key safe.

How will our department benefit from this?

- Quick access to building keys helping save lives and property.
- Eliminates the need to carry individual keys for every property in your community.
- Eliminates the need to forcibly gain access to a building saving property damage especially in a false alarm situation.

How do we start?

- Simply fill out the enclosed registration form and return it to us. We will then send you a supply of order forms. Upon request, we can provide you with a sample key safe.
- Many communities have passed ordinances requiring these key safes to be installed. Others provide the system on a voluntary basis.

What is the cost to the fire department?

- There is no cost to the fire department. Order forms and keys are provided at no charge.

How does a building owner purchase a Supra Key safe?

- The building owner obtains an order form from the fire department signed by an authorized representative from the fire department. The owner then completes the form and returns it to us with the payment for the order enclosed. The key safe is then shipped to the address indicated on the order form. The unit is shipped in the unlocked position so that the owner may install the key safe at a location specified by you. The unit is then locked by the fire department securing the building access keys within the key safe.

Who will have access to the master keys?

- Only the fire department and Supra Products have access to the master key.

How secure are the Supra key safes?

- The Suprasafe #2 is UL listed for security. An optional tamper switch is available to provide additional security by connecting to the building's security system.
