## Easton Electronics awarded Massachusetts statewide contract to provide FIR03 Fire/EMS, Police Equipment & Supplies and Related Services and Repairs

Canton, MA., October 1, 2010: The Commonwealth of Massachusetts Fire/EMS, Police Team (PMT) today awarded Easton Electronics, Inc. a statewide contract to provide Fire/EMS, Police Equipment & Supplies and Related Services and Repairs to Fire and Police Departments throughout the state providing such departments with a much simpler means of purchasing products and services from the company as well as providing departments assurance that the company meets critical state bid guidelines including such criteria as fair pricing and quality products and services.

“Fire and Police Departments throughout Massachusetts now have a choice when choosing a vendor from the state bid list from which to purchase Fire/EMS and Police products and services. Our vast array of wireless and wired alarm reporting systems as well as our MNS (Mass Notification Systems) products and services are proven to meet the demanding needs of today’s Public Safety organizations.” said Mark Westcott, President of Easton Electronics. “In the past departments looking to purchase such equipment and services did not have a competitive choice when choosing a vendor from the state bid list but this has now changed. In this era of greatly reduced budgets and staffing, departments need to do more with less and we welcome the opportunity to help them achieve such goals.”

The FIR03 contract is now effective and available for purchases. Departments looking for more information on the products and services provided by Easton Electronics or looking to purchase products through the FIR03 contact should contact Dave Westcott, Municipal Systems Sales Manager at (781) 828-1955 ext 10 or via email at [davewestcott@easton-electronics.com](mailto:davewestcott@easton-electronics.com).

### **About Easton Electronics**

Established in 1984, Easton Electronics provides a full end-to-end solution of fire detection, reporting and MNS (Mass Notification Systems) systems and services. Easton Electronics, Inc. is the provider of the most advanced wireless alarm reporting system available: The WARN (Wireless Alarm Reporting Network) system which includes the patented advanced technology of the AES IntelliNet wireless mesh network, the only wireless alarm reporting system in which every radio is a transmitter, receiver (transceiver) AND a repeater forming a self-healing, highly-reliable long range wireless alarm reporting network.
